

I want to voice my support for adding the ITFS/MDS 2.5ghz spectrum to the unlicensed 2.4ghz range.

I work in the networking industry. Current unlicensed spectrum in the 2.4 and 5ghz ranges have enabled our customers to use inexpensive and rapidly-deployed networking solutions. Without this unlicensed spectrum our customers would have to deal with long install delays and higher priced equipment. With the rapid growth of WiFi, we have concerns of saturation of the spectrum. Opening more spectrum would allow our customers to continue to benefit from rapid deployment times and lower costs using unlicensed spectrum technologies. Thank you.
